SCRUM Sprint 1

Acceptance Criteria:

AC-001: Password Complexity Rule

Given the user is creating or updating a password

When the password is submitted

Then the system shall enforce that the password meets all of the following rules:

• Minimum length of 8 characters

• Maximum length of 64 characters

• At least one uppercase English letter (A–Z)

• At least one lowercase English letter (a–z)

• At least one number (0–9)

https://melharouny.atlassian.net/si/jira.issueviews:issue-html/SCRUM-2/SCRUM-2.html

1/2

- At least **one** special character from the allowed set below:
Allowed special characters:
! @ # \$ % ^ & * () _ + - = { } [] | : ; ' ' < > , . ? / \
- **Spaces** are not allowed.
- **Emoji** characters are not allowed.
- Characters from other languages (e.g., Arabic, German, Chinese, Japanese, etc.) are not allowed.

AC-002: Common Password Rejection

Given the user is creating or updating a password
When the password is submitted
Then the system shall reject passwords found in a compromised or commonly used password list.

Common password validation shall be **case-insensitive**.

The system shall validate passwords against a maintained list of commonly used passwords.

AC-003: Validation Message

Given the user submits an invalid password
When the password validation fails
Then the system shall display a validation message indicating the specific password rule(s) that were violated.

AC-004: Password Visibility Toggle

Given the user is entering a password
When the password field is displayed
Then the password shall be masked by default.

And

Given the password is masked
When the user selects the visibility toggle icon
Then the password shall be displayed in plain text.

And

Given the password is visible
When the user deselects the visibility toggle icon
Then the password shall be masked again.

Description

As a user, **I want to** create a secure password, **so that** my account is protected against unauthorized access.
